Executive Leadership Consortium:

AI Agents and the Future of the Enterprise

Building on the success of previous editions, AI & Industry addresses the transition into the Agentic Age. AI has matured into a General-Purpose Technology, comparable to electricity or the internet. We are moving beyond assistants toward Strategic Value Creation. In this 3rd edition of the consortium, 12 leading manufacturing companies collaborate to move "Above the Loop," shifting from performing tasks to orchestrating an Agentic Operating System for the future of production.

Program 2026/27

The consortium follows a structured 5-session roadmap toward industrial autonomy. Each session addresses a core pillar of the agentic shift:

- **Session 1: Agentic Process Chains & Orchestration:** Hands-on Workshop. Moving from single-prompt interactions to complex agentic chains. Participants build and govern agentic systems that decompose and execute end-to-end tasks.
- **Session 2: The Future of Computing, AI & Quantum:** Exploring the next frontier of industrial intelligence, from specialized AI hardware to the transformative potential of Quantum computing, and how these technologies redefine the boundaries of computational power.
- **Session 3: Physical Intelligence & Embodied AI:** Closing the "simulation-to-reality" gap. Integrating agentic reasoning with shop-floor hardware, moving from rule-based robotics to training-based systems capable of zero-shot learning.
- **Session 4: Organizational Redesign & "Above the Loop" Leadership:** The human element as key factor. Redesigning workforces into Human-Agent Teams and training leaders to steer and validate autonomous workflows rather than executing manual operational steps.
- **Session 5: Strategy & Business Model Innovation:** Capturing the new profit pool. Navigating the value shift toward orchestration and physical intelligence, identifying new AI-native revenue streams and competitive moats.

University of St.Gallen

Thought Leaders

8–12 Firms

Technology Partners

STRUCTURE

We support the evaluation and **guide the adoption** of agentic AI solutions within your organization. We involve **thought leaders** from the manufacturing and tech industries. Our **proven learning format** helps develop a management toolbox and practical approaches for shaping future-oriented organizations, enabling the efficient and effective use of AI agents. In addition, our project partners benefit from a trusted exchange of experiences and networking opportunities. Format **tailored for executives**: five one-day workshops held in 2026 and 2027, with support between workshops and each accompanied by optional networking dinners.

1) Hands-on AI-Automation	2) Future of Computing	3) Intelligence & Embodied AI	4) "Above the Loop" Leadership	5) Business Model Innovation
University of St.Gallen (HSG) *30 October 2026*	IBM, Zurich *January 2027*	Google / AWS*, Zurich *End of Q1 2027**	Zühlke / Google*, Zurich *Q2 2027**	Microsoft / AWS*, Zurich *Q2/Q3 2027**

*Details to be determined together with participants.

OUTCOMES

We focus on evaluating and implementing your firm's **use cases**. We contribute state-of-the-art research insights from management, AI and technology. Our global network connects you with leading institutions and companies. **Limited to 12 firms** per cohort to ensure a personalized and engaging setting. With our **proven methodology and expertise**, we generate insights and value for all participating partners—gaining strategic insight, executive frameworks, and peer benchmarking to guide your AI transformation.

CONTRIBUTION

Each participating company invests **CHF 15'000** to unlock the potential of AI agents. **[Cohort start — t.b.d.]** — secure your spot now.
